**Emverm Approved to Treat Systemic Worms**

On Jan. 15, 2016, Impax Laboratories announced U.S. Food and Drug Administration (FDA) approval of Emverm™ (mebendazole) 100mg chewable tablets. Mebendazole is an anthelmintic (anti-worm) drug that was first approved in 1974. Emverm is indicated for treating several kinds of hookworms, pinworms, roundworms and whipworms. Recommended dosing for most indications is one tablet twice a day for three days, repeated after three weeks if the infestation does not clear. Each Emverm tablet will be packaged individually on a blister card. Launch is planned for early in the second quarter of 2016, but pricing is not yet known. Prescribing information is available at:
